Projects

1. Wheelanes [Live Website](#) [Client side github repository](#) [Server side github repository](#)

It's a used car selling website where registered seller can upload, edit, delete and advertise their products or cars.

- Smooth user experience assured.
- Separate routes for the seller, buyer, and admin.
- Application security is ensured with JsonWebToken and private routes.
- Technologies used: React js, TailwindCSS, DaisyUI, Firebase, Axios, Express Js and MongoDB.

2. PiJournal [Live Website](#) [Client side github repository](#) [Server side github repository](#)

This is a journal service provider's website where some specific services are provided.

- Developed as a Single Page Application
- All the services provided by the owner of the website will appear on the services page. A logged in user can post a review for a service. Later on the user can edit or delete his/her review.
- Technologies used: React js, TailwindCSS, DaisyUI, Firebase, Axios, Express Js and MongoDB.

3. Skill Hunter [Live Website](#) [Client side github repository](#) [Server side github repository](#)

This is also a skill sharing platform.

- Implemented email-password based authentication and two different social login system.
- There are six courses on the courses page where every course is dynamic and their details can be downloaded into pdf format.
- Technologies used: React js, TailwindCSS, DaisyUI, Firebase in the front-end, and Express Js in the back-end.
